
Carbon fibre instead of triax

Posted by Taylor78 - 2010/02/04 17:14

On Snowboard components page it says that Carbon fibre can be used. Do you have any spec's on what or how to use it as i may be able to get my hands on this easier than the triax.

Would it be the same lay up as triax?

Thanks

Lee

The rule of thumb of carbon vs glass, is that carbon is 7 times stronger than glass. If you use 21oz triax glass you will get the same strength ratio with 7oz carbon and 2/3 less weight. the down fall is its thinner and you will have less soak up. If you use it alone as your main cloth I would butter your base and core along with wetting out your carbon. Also the stuff is expencive.
